

TRANSLATING THE BIBLE

INTO MUSIC

[FANTASIA APOCALYPTICA]

December 5, 2017

Dr. Donald E. Knuth
Department of Computer Science
Gates Building 4B
Stanford University
Stanford, CA 94305-9045

Dear Dr. Knuth:

On behalf of the nominating committee for the Ide & Luella Trotter Prize and Endowed Lecture Series, I am pleased and honored to inform you that you have been selected as one of the recipients of the 2017-2018 Trotter Prize, awarded annually by Texas A&M University.

The Trotter Prize in Information, Complexity, and Inference was established in 2001 to recognize pioneering contributions to the understanding of the role of information, complexity and inference in illuminating the mechanisms and wonder of nature. Previous winners include Francis S. Collins, Francis Everitt, Roger Penrose, Charles Townes, and Steven Weinberg.

The Trotter Prize consists of a modest \$5,000 cash honorarium, along with an invitation to present a public evening lecture on the Texas A&M campus.

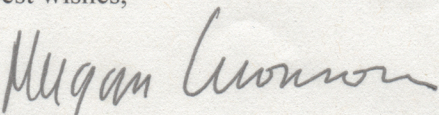

The Trotter Lecture Series is intended to reveal connections between science and religion, often viewed in academia as non-overlapping if not rival worldviews. Ideally each Trotter Lecturer will acquaint the audience with the essentials and intriguing complexities of their area of specialization and inferences drawn from them. At the same time they should address the task of building substantive connections on issues of broad and lasting significance between academic cultures.

I would appreciate a response from you at your earliest convenience indicating your willingness to accept this prize and the associated lecture opportunity at Texas A&M University. Further details regarding additional related activities will be forthcoming, depending on your response, but in the event you have any questions or concerns, please feel free to contact me.

For additional information about the series, including past winners and topics, please visit <http://www.science.tamu.edu/events/trotter>.

Again, congratulations on your selection as well as your outstanding accomplishments! We look forward to your visit to our campus.

Best wishes,

Meigan Aronson
Dean, College of Science

*Musica est exercitium arithmeticae occultum
nescientis se numerare animi.*

— GOTTFRIED LEIBNIZ, letter to
Christian Goldbach (17 April 1712)

PREFACE

Here is your book, the one your thousands of letters have asked us to publish. It has taken us years to do, checking and rechecking countless recipes to bring you only the best, only the interesting, only the perfect. Now we can say, without a shadow of a doubt, that every single one of them, if you follow the directions to the letter, will work for you exactly as well as it did for us, even if you have never cooked before.

— *McCall's Cookbook* (1963)

THE PROCESS of preparing programs for a digital computer is especially attractive, not only because it can be economically and scientifically rewarding, but also because it can be an aesthetic experience much like composing poetry or music. This book is the first volume of a multi-volume set of books that has been designed to train the reader in various skills that go into a programmer's craft.

23 Nov 2011

In this book I plan to jot down thoughts for a project that may be crazy, but a "muse" has been encouraging me to embark upon it for more than 40 years. I hope to be able to write a piece of organ music that's based on the text of the Apocalypse (the mystical Book of Revelation), using the basic philosophy of Oulipo [more properly Oumapo], namely: constraints help to create great art. My model is Georges Perec's magnificent novel La Vie Mode d'Emploi [Life, A User's Manual] for which each of the 100 (or 99) chapters was written with something like 45 constraints in mind. I recall making about

I should mention that I consider this part of the Bible to be totally mystical and spiritual rather than literal or prophetic. It probably was written to provide an underground movement (early Christianity) with some coded messages of hope. But I'm intrigued by the fact that so many artists and writers have been inspired by these words, for nearly 2000 years by now; thus I can't resist the thought that perhaps I too might be led by these ancient words to create something that may be ^{newly} meaningful to people of the 21st century. Of course I may fail totally, and any music I write might be basically worthless. But, as I said, something has been urging me to do this for a long time, and I find that I cannot resist trying.

Gigglepiny (play on Gershwin's
Ain't Necessarily So)

The musical notation is written on a five-line staff. It begins with a treble clef and a key signature of two flats (Bb and Eb). The melody consists of several phrases of notes, including eighth and quarter notes, some beamed together. There are several accidentals (flats) throughout. A vertical line is drawn through the staff, roughly in the middle. The notation ends with a double bar line and a repeat sign.

Then I saw the Lamb break open the first of the seven seals, and I heard one of the four living creatures say in a voice that sounded like thunder, "Come!"

6:1 **Andantino** ♩=108
Sw strings

Gt oboe

The musical score is for a 4/4 time signature. The top staff is for strings (Sw strings) in treble clef, and the bottom staff is for oboe (Gt oboe) in bass clef. The tempo is marked 'Andantino' with a quarter note equal to 108 beats per minute. The key signature has one flat (B-flat). The score consists of four measures. The strings play a sustained chord in the first measure, followed by a dynamic marking of mf . The oboe plays a melodic line in the first and third measures, with a fermata over the final note in the third measure. The second and fourth measures are rests for the oboe.

6:1 THE FIRST SEAL IS ABOUT TO BE OPENED.
